

ROBOT RADIO: the talk of the internet

OUR ORIGINAL AND OPEN CONTENT

RobotRadio.net is a 24/7/365 webcast talkshow application combining web-syndicated news/blogs with phoned-in and typed-in listener comments, all read by a cast of synth-voiced botjocks, and layered over an ever-changing background of algorithmically generated ambient music. The stereo audio is streamed over the web and broadcast over satellite radio.
